

## Attaching a macro to field properties

Macros can be added to any objects whether they are on forms or reports. They can be added to the event properties of the object.

1. Add or select the control
2. Show properties
3. Select the Events categories
4. Select the event required.
5. From the drop down select the macro.

The macros do not have to be added to command buttons they can be added to other controls as well.
